## EPDM TANKING MEMBRANES

### Polygomma™ EPDM Tanking Membranes

Tanking is the term used to describe waterproofing of foundations of a building, often referred to as basements. This is the most critical area of a building as far as waterproofing is concerned. Once the building is constructed it is impossible to repair or change the waterproofing system from the positive side. Choosing the correct waterproofing system that is maintenance free and long lasting is extremely important.

The Polygomma EPDM membrane is a waterproofing membrane that lasts long, is able to take care of the structural movements of the earth and protects the foundation from the corrosive ground water.

### Advantages of Polygomma™ Tanking Membranes

- ✓ Expected to last as long as the building.
- ✓ Can sustain weight and load of the structure.
- ✓ Absorbs the movements of the soil and resists corrosive elements in the soil.
- ✓ Wide panel sizes ensure quick, easy and safe installation.
- ✓ No flames or torches used during installation.

It is the responsibility of the user to check the suitability of the product for its intended use. Suggestions made by Polygomma, orally and/or in writing may either be followed or modified or rejected by end user, engineer, owner, contractor, etc to best suit their purpose. No warranty is given or implied by us as the site conditions and skill of labour used for application is beyond our control. Many factors beyond our control can affect and influence the use and performance of our products at any particular application. Since these factors are uniquely within the users knowledge and control, it is essential that users evaluate the product to determine its suitability for purpose. Please ensure before using that product is suitable for the material intend application.
